THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 562 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 562 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

DETAILED ACTION

Allowable Subject Matter

Claims 1,4-16,58;17,18,22-28,59-61; 29-32,34-37,62;38-41,43-48,63;49,50,52-56.64 renumbered 1-55 are allowed.

2. The following is an examiner's statement of reasons for allowance:

The prior art made of record, in single or in combination, does not disclose explicitly the limitations of:

"associating each one of a plurality of worker objects for each one of the plurality of communication connections, wherein each worker object comprises an abstraction that represents collections of methods or processes and each worker object is encapsulated along with data needed to carry out the method or process of the worker object; distributing the data amongst the worker objects; forming messages using the distributed data within each respective worker object of the plurality of worker objects, based on a parameter of the respective worker object; wherein a first worker object has a first parameter value configured to establish a first respective predetermined portion of the bandwidth and a second worker object has a second parameter value configured to establish a second respective predetermined portion of the bandwidth which is different from the first respective predetermined portion of the bandwidth; delivering the messages formed within each worker object to an underlying layer of the plurality of communication connections so that each communication connection uses no more than the respective predetermined portion of the bandwidth to each of the plurality of communication connections." as disclosed in Claim 1.

"a plurality of worker objects, wherein each worker object is associated with one of the plurality of communication connections and is configured to form messages using the data distributed to the communication connection associated with that worker object based on a parameter of that worker object, and wherein each worker object comprises an Application/Control Number: 09/704,936

abstraction that represents collections of methods or processes and each worker object is encapsulated along with data needed to carry out the method or process of the worker object, wherein a first worker object has a first parameter value configured to establish a first respective predetermined portion of the bandwidth and a second worker object has a second parameter value configured to establish a second respective predetermined portion of the bandwidth which is different from the first respective predetermined portion of the bandwidth, and wherein each worker object is configured to deliver the messages formed within that worker object to an underlying layer of the plurality of communication connections so that each communication connection uses no more than the respective predetermined portion of the bandwidth allocated to that communication connection." as disclosed in Claim 17.

"a plurality of worker processes, wherein each one of the plurality of worker processes is configured to have a set of uniquely configurable communication parameters, is configured to receive the partitioned data from the communication process, is configured to form messages using the partitioned data, is configured to deliver the messages containing the partitioned data to an underlying layer of the plurality of communication connections based on the set of uniquely configurable communication parameters for that worker process, and is configured as an abstraction that represents collections of methods or processes, each worker process encapsulated along with data needed to carry out the method or process of the worker process, wherein a first worker object has a first parameter value configured to establish a first respective predetermined portion of the bandwidth and a second worker object has a second parameter value configured to establish a second respective predetermined portion of the bandwidth which is different from the first respective predetermined portion of the bandwidth." as disclosed in Claim 29.

"a communication station having a processor and a memory communicatively coupled to the processor, wherein the processor is programmed to provide a plurality of worker objects, wherein each one of the plurality of worker objects is configured to form

Application/Control Number: 09/704,936
Art Unit: 2476

messages using one of a plurality of partitioned data streams, to produce a separate communication connection through the communication link, and configured as an abstraction that represents collections of methods or processes, each worker object encapsulated along with data needed to carry out the method or process of the worker object, wherein a first worker object has a first parameter value configured to establish a first respective predetermined portion of the bandwidth and a second worker object has a second parameter value configured to establish a second respective predetermined portion of the bandwidth which is different from the first respective predetermined portion of the bandwidth, and wherein each of the plurality of worker objects includes a set of communication connection parameters that are uniquely configurable to determine the manner in which the messages are sent by each of the plurality of worker objects to an underlying layer of the communication link." as disclosed in Claim 38.

"associating each one of a plurality of worker processes to each one of a plurality of communication connections, wherein each one of the plurality of worker processes is configured to receive data, messages of the data, to send the messages containing the data to an underlying layer of the communication link having a bandwidth, and configured as an abstraction that represents collections of methods or processes, each worker process encapsulated along with data needed to carry out the method or process of the worker process; uniquely configuring a set of communication connection parameters uniquely associated with each of the plurality of worker processes; producing a separate communication connection for each one of the plurality of worker processes, wherein a first worker object has a first parameter value configured to establish a first respective predetermined portion of the bandwidth and a second worker object has a second parameter value configured to establish a second respective predetermined portion of the bandwidth which is different from the first respective predetermined portion of the bandwidth; and delivering the messages from at least one of the plurality of worker processes to the underlying layer for transmission through the communication link based on the respective set of communication connection parameters uniquely associated with the at least one of the plurality of worker process." as disclosed in Claim 49.

Application/Control Number: 09/704,936

- Additionally, all of the further limitations in claims 4-16,58; 18,22-28,59-61; 30-32,34-37,62;39-41,43-48,63; 50,52-56,64 are allowable since the claims are dependent upon the Independent claims, respectively.
- 4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
